RESEARCH PARTICIPANTS WANTED

The VASCULAR Study
Did you know that trouble with blood circulation can be an early “trigger” in memory loss? We are studying the role of circulatory function on memory and the risk of Alzheimer’s disease.

* **Participants will:**
  * Have 4 visits in a 2 year period to the study center
  * Evaluation to assess your memory and thinking abilities
  * Brain scans, vascular ultrasounds, spinal taps, blood tests, and blood pressure readings
  * Be compensated for your time and travel

* **Volunteers needed**
  * Men and Women
  * 50 years or older
  * Have no memory problems or
  * Have early or mild memory problems called Mild Cognitive Impairment (MCI)
  * Those who have diagnosis of dementia are not eligible

For more information call: 404-712-2036 or 404-712-7422

Principal Investigator: Ihab Hajjar, MD. This study is funded by NIH.
